SUMMARY

Business Information Systems graduate with strong experience in technical operations, arcade/game machine maintenance, PCB design, and software development. Skilled in hardware troubleshooting (VR, arcade, hydraulic, solenoid systems), software/IoT development (Arduino, Flutter, C++), and project management. Adept at preventive and on-spot maintenance, system integration, and delivering innovative solutions that improve efficiency and customer engagement. Seeking to leverage both technical and operational expertise in a challenging role.

EXPERIENCE

Rush Hub (Parent Company: Emma Play), 5th Settlement – Maintenance Technician

October 2024 – August 2025

- Performed preventive and on-spot maintenance for arcade games, VR systems, hydraulic and piston-driven machines, and solenoid-based equipment.
- Diagnosed and repaired electrical and mechanical faults, ensuring minimal downtime and safe operation.
- Supported arcade operations by maintaining high-performance standards across all gaming equipment.
- Collaborated with team members to implement preventive maintenance schedules.

Key Achievements:

- Successfully reduced downtime by quickly addressing urgent maintenance requests.
- Built expertise in troubleshooting hydraulic and solenoid systems in entertainment equipment.

Rush Hub, 5th Settlement — Freelance PCB Designer & Developer

September 2024 – October 2024

- Designed and built single and double-layer PCBs for various applications.
- Provided programming support for a game arcade reader board, ensuring smooth functionality.

Achievements:

- Successfully delivered high-quality PCB designs that met the project specifications.
- Contributed to the development of a game arcade system, optimizing the reader board's performance.

Smiles Inc, Maadi — Technical Operation Manager

September 2020 – March 2024

Responsibilities:

- Managed project executions, ensuring timely delivery and adherence to quality standards.
- Monitored and maintained technical systems to ensure optimal performance.
- Designed and built custom boards using Arduino to meet specific client requirements.
- Implemented relay-based solutions for automation and control purposes.
- Handled computer management and networking tasks to support operational needs.
- Worked with high-voltage devices, such as controlling lamps and other electrical components.

Key Projects:

- **Vodafone Project:** Developed a unique bike-riding blender mechanism where customers had to pedal to operate the blender, promoting physical activity while preparing fresh juices.
- **Other Projects:** Led various initiatives involving Arduino-based solutions tailored to client needs, enhancing operational efficiency and customer satisfaction.

Achievements:

1. Successfully integrated innovative technologies into operational processes, resulting in improved efficiency and customer engagement.
2. Received recognition for delivering creative solutions that met or exceeded client expectations.
3. Contributed to team productivity through effective project management and technical expertise.
4. Skills Developed:
5. Proficiency in Arduino programming and hardware integration.
6. Expertise in relay-based control systems and high-voltage device management.
7. Strong understanding of computer networks and system administration.

EDUCATION

Canadian International College, New Cairo — *Bachelor of Business Technology in Business Information Systems*

July 2020 - July 2024

This degree focuses on understanding the interaction, planning, development, and operations of information systems within organizations. The curriculum covers areas such as:

- | | | |
|-----------------------------------|-------------------------|-----------------------|
| • Information Technology Planning | • E-Business Strategies | • Project Management |
| • E-Business Strategies | • Business Management | • Programming |
| • Business Management | • Networking | • Database Management |

PROJECTS

GRADUATION PROJECT — *Marketing Intelligence with Grade (A+)*

Role: Team leader

- Developed an advanced hologram fan system integrated with AI technology.
- Designed 3D models including logos and holograms.
- Assigned tasks to team members and managed project milestones.
- Integrated AI models for facial recognition, hand gestures, and
- Responsible for task assignments and performance monitoring
- Sole developer, designed and developed the application.
- Contributed to every aspect of the project including documentation and PowerPoint.
- Contributed to writing, modifying, checking and printing part one and two of the documentation Assisted with some financial resource.

SKILLS

- **Microsoft Word, PowerPoint, and Excel:** Created and edited comprehensive documents and presentations for project documentation, ensuring clarity and professionalism.
- **Software Development:** Proficient in a variety of programming languages and frameworks:
- **Flutter for mobile and desktop app development:** (C++, C#, Unity, Dart, Java, VB)
- **Hardware and IoT:** Experienced in designing and implementing hardware solutions and IoT devices: Proficient with Arduino for custom hardware projects and other microcontrollers, Familiarity with sensors, actuators, and IoT protocols
- **Team Collaboration:** Demonstrated ability to work effectively in teams, assigning tasks, and managing project milestones to ensure successful project completion.
- **Decision Making:** Made critical decisions in task assignments, resource procurement, and project direction to keep projects on track and within budget.
- **Communication:** Delivered key presentations to rave reviews, showcasing clear and persuasive communication of technical concepts and project outcomes.
